CAREER GOALS

Over the next 2-3 years, my goal is to enhance my **Front-end Development** skills. I aspire to build proficiency in creating captivating and high-quality user interfaces. Following this phase, I plan to broaden my horizons and elevate my knowledge and skills to become a proficient Fullstack expert. I believe that continuous growth and steadfast commitment will enable me to achieve my career goals.

EDUCATION

Hoa Binh University

07/2017 - 09/2021

Major: Software engineer

Degree classication: Good - GPA: 3.2

Work Experience

iNET Solution

04/2021 - 07/2021

Front-end Developer

- Project **Website Selling Ticket Events**: This is the website that helps people buy events ticket, anytime, anywhere from right on website.

Role: Web Developer

Main responsibilities:

- Assisting in the development of web applications and websites using PHP programming language.
- Collaborating with the development team to understand project requirements and objectives.
- Learning and utilizing frameworks, libraries, and tools commonly used in PHP development, such as Laravel.

STECH Company

09/2021 - 10/2023

Front-end Developer [ReactJS]

Main responsibilities:

- Developing responsive and user-friendly web applications using ReactJS and NextJS.
- Analyze, code, review and refactoring code
- Implementing UI/UX designs and ensuring consistent user experience across different devices and browsers.
- Working with APIs and integrating data from back-end services.
- Handling and managing data flow and asynchronous operations using Axios or Fetch.
- Working with version control systems (e.g., Git) to manage codebase and collaborate with team members.

(2021-2022)

- Project **Landing Page**: The landing page served as the first point of contact for potential customers, providing them with an overview of our innovative solutions and highlighting the key features and benefits of our products.

Role: Front-End Developer

Responsibilities: Design & Development

Technologies used: HTML5, CSS3, JS, ReactJS

(2021-2023)

- Project **CMS**: CMS (Content Management System) is used to manage the bots that scrape posts from social media platforms and track the number of visitors to the Social Media website.

Role: Front-End Developer

Responsibilities: Design & Development

Technologies used: HTML5, CSS3, JS, ReactJS, REST API

(2021-2023)

Project **Social Media**:

- Social media website that showcased videos from various socialmedia platforms such as YouTube, TikTok, Facebook, Twitter, and more where they could easily discover and view videos from different social media networks in one place.
- In addition to video aggregation, the social media website also included features that allowed users to create posts, interact with content, and engage with other users. Similar to platforms like Facebook, users had the ability to like, comment on, and share videos and posts.
- The website also offered user profile functionality, where users could create and customize their profiles, add personal information, and upload profile pictures. The user profiles acted as a central hub for users to showcase their interests, connect with others, and view their activity history.

Role: Front-End Developer

Responsibilities:

- Design
- Development
